Comment Text :

- 1 [--->I am very concerned of the potential risk of transportation accidents in the
- 2 shipping of spent nuclear fuel and high level radioactive waste through the St. Louis  
area, as well as other highly populated areas of the country. [There should be some  
alternative, available now or as yet unresearched, that the energy companies could use  
that allows a safe disposal of this waste. It seems the companies rushed into the  
production of nuclear energy without much thought to the future of waste disposal. It  
reminds me of the Y2K problem. Early computer programmers did not plan for the future  
and the use of "2000". It was left to worry about, later. The energy companies simply  
did not worry about disposal, worry about that later. Or better yet, don't worry  
about it all; just ship it across the country to Nevada and bury it. Future  
generations will worry about it.]
